

Lorene's "What's Wrong??" Checklist

NO - BRAINERS

- Is it muted?
- Is it switched on?
- Is it plugged in?
- Is it plugged into the right hole?
- Is your headphone volume turned up?
- Need new batteries?
- Need phantom power?

HEAD

SCRATCHERS

- Is it a bad connection? Can you make it more secure?
- Is it a bad cord?
- Is it a bad or incorrect adaptor?
- Can you solo each line to pinpoint your sound problem?
- How are the gain levels for each line?
- What things ARE working and can you compare?

CONSULT THE

INTERNET

- Does it need a driver installed on your computer?
- Does your equipment/software need a factory update?
- Are you using your computer sound card or your interface?
- Are there known quirks with that piece of equipment or software? What workarounds have others used that could help you?

PERSONAL

BASICS

- Have you eaten lately?
- Are you tired?
- Have you taken a break?
- Have you called a friend? (Bonus: maybe you could call a production buddy who may have run into the same problem as you!)
